Our Brands

The Bio-Techne brands and product lines are some of the most referenced in the life sciences industry and include R&D Systems, Novus Biologicals, Tocris Bioscience, and ProteinSimple. We have brought these brands together as Bio-Techne to be a stronger scientific partner to help you attain your research goals. Our vast product range includes bioactive proteins, application-qualified antibodies, Quantikine® ELISAs, Luminex® Assays, and small molecule activators and inhibitors.

LIFE SCIENCE BRANDS

Researchers trust R&D Systems as the most referenced supplier of bioactive proteins and immunoassays in the industry. R&D Systems manufactures over 13,000 primary antibodies and produces many other products relevant for neuroscience research including Luminex® assays, and reagents for culturing and investigating neural stem cells.

Novus Biologicals licenses, manufactures, and markets antibodies to over 20,000 unique targets to support a wide array of neuroscience research areas. Novus is built on honesty, collaboration, and strong relationships and continues to provide quality tools that accelerate research. Every product is backed by our 100% guarantee.

Tocris Bioscience is the leading supplier of high performance tools for neuroscience research. The Tocris range of small molecules and peptides includes novel and exclusive receptor ligands, ion channel modulators, enzyme inhibitors, caged compounds, fluorescent probes, and screening libraries.

ProteinSimple develops and commercializes proprietary systems and consumables for protein analysis that ultimately help reveal new insights into the true nature of proteins. For neuroscientists who regularly conduct multiple Western blot experiments, ProteinSimple products, including the Simple Western™ and Simple Plex™ platforms, make protein analysis simpler, more quantifiable, and affordable.

PROTEINS

R&D Systems® recombinant and natural proteins are the industry's premiere bioactive proteins. Extensive quality control testing throughout development and manufacturing processes ensures consistent performance that cannot be matched.

Recombinant and Natural Proteins

Guaranteed Performance, Saving You Time and Money

- Every lot is tested before release and again after bottling to ensure high bioactivity and consistent performance.
- We back up our performance specifications with relevant bioassay data.

High Purity for Trusted Results

- Our proteins are highly pure and, at minimum, must meet the lowest endotoxin specification (<0.1 EU/µg) on the market.

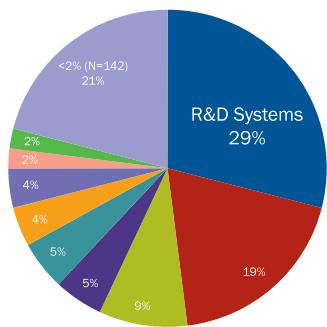

Largest Selection

- We offer over 4,500 recombinant and natural proteins from over 22 species.

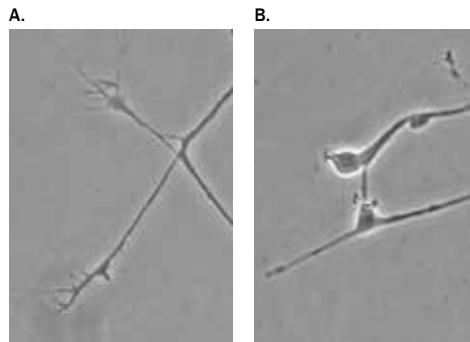

Manufactured by Scientists, for Scientists

- More than 95% of our proteins are manufactured in-house.
- N-terminal amino acid sequences are verified for guaranteed authenticity.

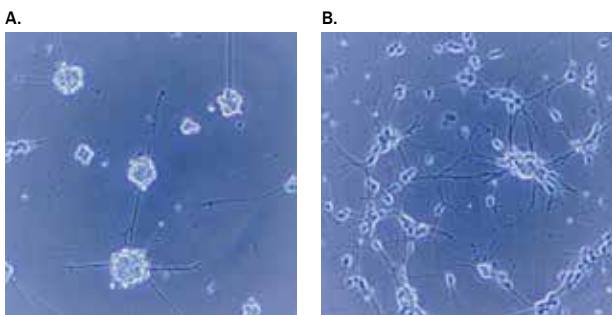

Most Referenced Protein Manufacturer

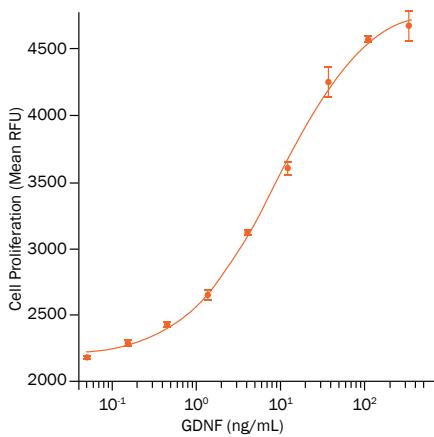

Protein Citations by Vendor. A literature survey of 1,125 manuscripts published in 2013, containing 15,180 product citations from 16 different journals related to cancer, immunology, neuroscience, and stem cells, was conducted to determine the number of citations referencing the use of R&D Systems® proteins compared to the number referencing proteins manufactured by other companies. Of the 1,586 total protein citations identified in the survey, 29% cited the use of our proteins. The percentage of citations attributed to eight other major protein manufacturers is also shown (clockwise from R&D Systems, red-green sections). The final segment in the pie chart (21%, light purple section) includes 333 citations referencing products from 142 different companies. All companies listed under this category had less than 2% of the total number of citations.

Semaphorin 3A-Induced Growth Cone Collapse. A fully extended chick dorsal root ganglion growth cone grown in the presence of Recombinant Human β-NGF (Catalog # 256-GF) was untreated (A) or treated (B) with Recombinant Human Semaphorin 3A (Catalog # 1250-S3). Treatment with Semaphorin 3A induced growth cone collapse. All cited reagents are from R&D Systems.

Meteorin-like Stimulates Neurite Outgrowth. Embryonic rat cortical neurons (E18) were cultured for 3 days in the absence (A) or presence (B) of Recombinant Mouse Meteorin-like/METRNL (R&D Systems, Catalog # 6679-MN) immobilized on a nitrocellulose-coated microplate. The presence of the Meteorin-like protein significantly enhanced neurite outgrowth.

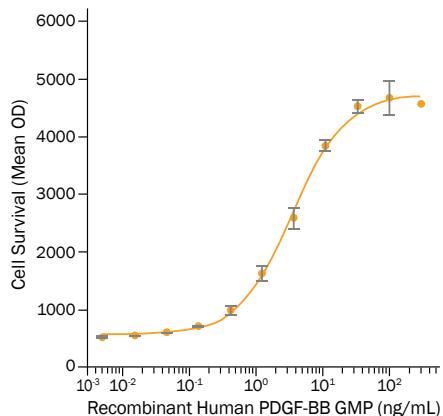

GDNF Induces Proliferation of Human Neuroblastoma Cells. The SH-SY5Y human neuroblastoma cell line was treated with increasing concentrations of Recombinant Human GDNF (Catalog # 212-GD). Cell proliferation was assessed using Resazurin (Catalog # ARO02). All cited reagents are from R&D Systems.

We have further developed our high-quality proteins to support developing research and bioproduction demands.

GMP-Grade Proteins

- Proteins are produced in a certified ISO 9001 facility in compliance with relevant guidelines.*
- They exhibit the same consistent performance that is expected from R&D Systems® recombinant proteins.
- We offer the largest selection of GMP-Grade proteins, including many that are available exclusively from R&D Systems.

Bioactivity of GMP-Grade Recombinant Human PDGF-BB. GMP-Grade Recombinant Human PDGF-BB (Catalog # 220-GMP) enhances survival of rat embryonic (E16-E18) cortical neurons. Cell survival was assessed using Resazurin (Catalog # AR002). All cited reagents are from R&D Systems.

Animal-Free™ Recombinant Proteins

- Proteins are manufactured in a laboratory exclusively dedicated to the production and purification of recombinant proteins under animal-free conditions.
- Animal Component-Free Process (ACFP) recombinant proteins, which are expressed in an animal-free certified Sf 9 insect cell line using dedicated animal-free raw materials and labware, are also available.
- Animal-Free™ and ACFP recombinant proteins exhibit the same biological activities as our conventionally manufactured recombinant proteins.

ACFP and Conventionally Manufactured Human VEGF 165 Exhibit the Same Bioactivity. Both ACFP Recombinant Human VEGF 165 (Catalog # ACFP293; gray) and conventionally manufactured Recombinant Human VEGF 165 (Catalog # 293-VE; orange) stimulate the concentration-dependent proliferation of human umbilical vein endothelial cells as measured using Resazurin (Catalog # AR002). All cited reagents are from R&D Systems.

ProDots™ Proteins

- Our industry-leading bioactive proteins are packaged into easy-to-use lyophilized balls that can be rolled directly into cell culture media.
- Save time and ensure maximum recovery of your purchased protein by simply dropping the protein ball directly into your cell culture medium.

Defining Features of Our Neuroscience Antibodies

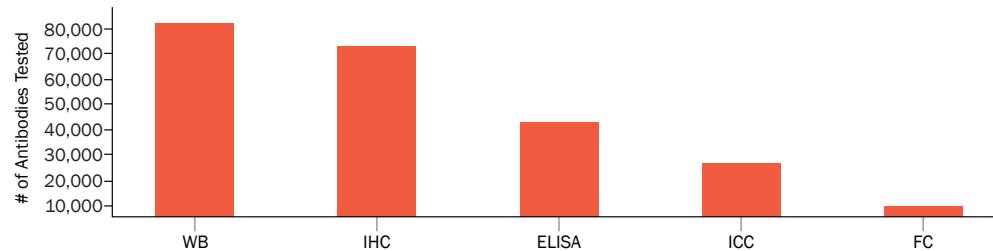

Diverse and Extensive Analyte Selection

- Bio-Techne now offers over 168,000 antibodies between the Novus Biologicals and R&D Systems portfolios (with 3,700 molecules available for conjugation). These antibodies cover key research areas in neuroscience including:

<ul style="list-style-type: none"> • Neurodegeneration • Neuroendocrinology • Synaptic Transmission 	<ul style="list-style-type: none"> • Developmental Biology • Sensory Systems • Signal Transduction 	<ul style="list-style-type: none"> • Neural Stem Cells • Cognition and Behavior • Neurotrophic Receptors
--	---	---

Tested in Multiple Applications

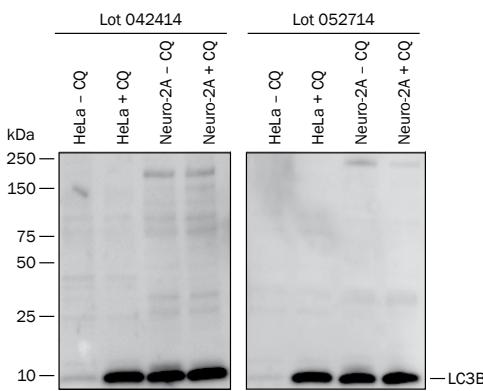

- Our antibodies are validated for multiple applications including: Western blot (WB), immunocytochemistry (ICC), immunohistochemistry (IHC), flow cytometry (FC), enzyme-linked immunosorbent assay (ELISA), immunoprecipitation (IP), chromatin immunoprecipitation (ChIP), and blocking/neutralization (B/N).

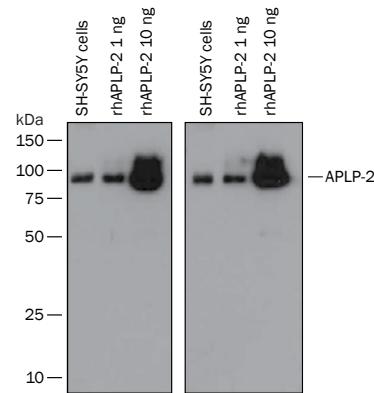

- We are constantly screening our extensive antibody library for use with the ProteinSimple Simple Western™ assay. To date, we have certified 900 antibodies as being compatible for use with your Wes™, Sally Sue™ and Peggy Sue™ instruments.

Thorough Manufacturing and Validation Processes

- Our rigorous purification and quality control processes ensure lot-to-lot specificity.

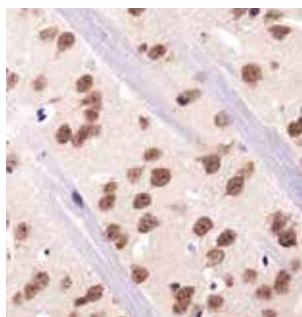

Lot-to-Lot Consistency of LC3B Detection by Western Blot.
Specific detection of Human LC3B in lysates from the HeLa human cervical epithelial carcinoma and Neuro-2A mouse neuroblastoma cell lines that were either untreated (-CQ) or treated (+CQ) with Chloroquine was confirmed using two separate lots of a Rabbit Anti-Human/Mouse/Rat LC3B/MAP1LC3B Polyclonal Antibody (Novus Biologicals, Catalog # NB600-1384).

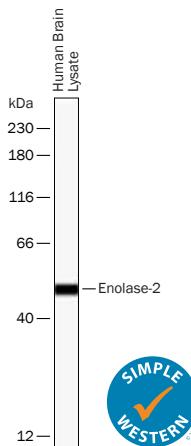

Lot-to-Lot Consistency of APLP-2 Detection by Western Blot.
Specific detection of Human APLP-2 in lysates from the SH-SY5Y human neuroblastoma cell line was confirmed with increasing concentrations of recombinant human APLP-2 using two separate lots of a Mouse Anti-Human APLP-2 Monoclonal Antibody (R&D Systems, Catalog # MAB49451).

Application Data in a Wide Variety of Neuronal Substrates

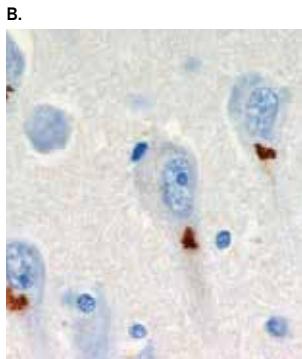

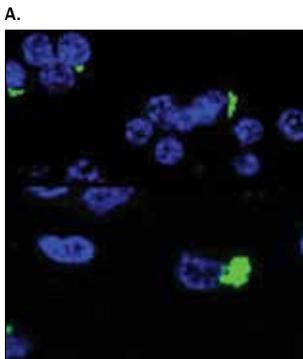

NeuN in Mouse Brain. NeuN was detected in immersion-fixed paraffin-embedded sections of mouse brain (cerebellum) using Rabbit Anti-Human/Mouse/Rat NeuN Antigen Affinity-Purified Polyclonal Antibody (Novus Biologicals, Catalog # NBP1-77686). The cerebellar tissue was stained using HRP and DAB (brown), and counterstained with hematoxylin (blue).

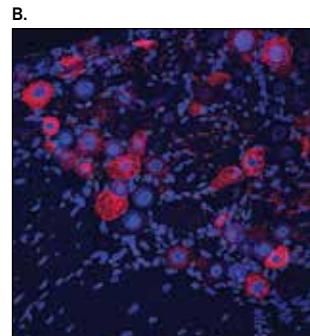

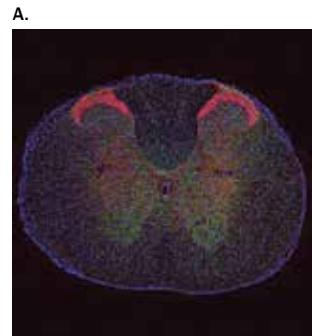

Detection of Human Enolase-2 by Simple Western™. Simple Western™ lane view shows lysate of human brain. A specific band was detected for Enolase 2/Neuron-Specific Enolase at approximately 47 kDa (as indicated) using a Rabbit Anti-Human/Mouse/Rat Enolase 2/Neuron-Specific Enolase Polyclonal Antibody (Novus Biologicals, Catalog # NB110-58870).

Support the Latest Developments in Neuroscience

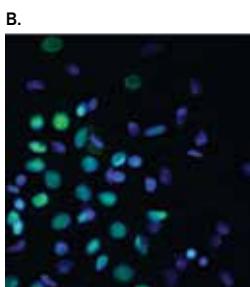

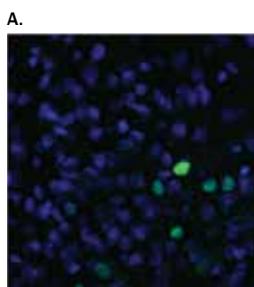

C9RANT in Human Cerebellum and Hippocampus. C9RANT, a protein that abnormally accumulates in brains of subjects afflicted with c9FTD/ALS, was detected in immersion-fixed paraffin-embedded sections of human hippocampus (A) and cerebellum (B) from individuals with c9FTD/ALS using a Rabbit Anti-C9RANT Polyclonal Antibody (Novus Biologicals, Catalog # NBP2-25018). The hippocampal tissue (A) was stained using a fluorescently-labeled secondary antibody (green) and then counterstained with DAPI (blue). The cerebellar tissue (B) was stained using HRP and DAB (brown), and counterstained with hematoxylin (blue). Images courtesy of Dr. Tania Gendron and Kevin Bieniek, Mayo Graduate School.

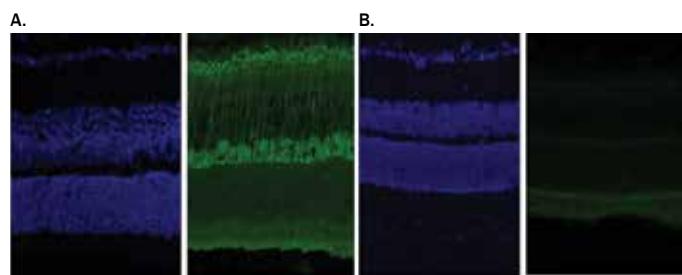

μ Opioid Receptor Expression in Mouse Spinal Cord and Dorsal Root Ganglion. The μ Opioid Receptor/OPRM1 was detected in perfusion-fixed frozen sections of mouse spinal cord (A) and dorsal root ganglion (B) using a Rabbit Anti-Rat μ Opioid R/OPRM1 Monoclonal Antibody (Catalog # MAB8629). The tissue was stained using the NorthernLights™ (NL) 557-Conjugated Donkey Anti-Rabbit IgG Secondary Antibody (Catalog # NL004; red) and counterstained with DAPI (blue). In the spinal cord, specific staining was localized to the dorsal horn. All cited reagents are from R&D Systems.

SOX2 Expression in Hypothalamic Neuroprogenitor Cells

Following Fluoxetine Treatment. Rat hypothalamic neuroprogenitor cells (E18-19) were incubated for 18 days either in the absence (A) or presence (B) of the selective serotonin reuptake inhibitor Fluoxetine. Cells were then examined for the expression of the progenitor cell marker SOX2 using the Mouse Anti-Human/Mouse SOX2 Monoclonal Antibody (R&D Systems, Catalog # MAB2018). The cells were stained with an Alexa Fluor® 488-conjugated goat anti-mouse secondary antibody (green) and counterstained with DAPI (blue). Images from Sousa-Ferreira, L. et al. (2014) PLoS One 9:e88917.

mGluR6 is Down-Regulated in SIRT6-KO Retina. mGluR6 was detected in whole retina from wild-type (A) and SIRT6 knock-out (B) mice using a Rabbit Anti-Rat/Mouse Metabotropic Glutamate Receptor 6 (mGluR6) Antigen Affinity-Purified Polyclonal Antibody (Novus Biologicals, Catalog # NB300-189). The tissue was stained using an Alexa Fluor® 488-conjugated rabbit anti-goat IgG secondary antibody (green) and counterstained with DAPI (blue). Images from Dafne et al. (2014) PLoS One 9: e98831.

ELISAs

Quantikine® ELISA Kits

R&D Systems® Quantikine® ELISA kits are complete, fully validated, ready-to-run sandwich ELISAs that are considered the industry gold standard.

Legendary Reproducibility

- Our assays are calibrated by ELISA against a master standard to ensure that our kits generate accurate data consistently over time. Results today can be compared to last month or even last year, and will be comparable to future results generated.

Confidence with Controls

- Our assays have controls with assigned ranges that confirm assay performance.

Unrivaled Reputation

- Our ELISA kits are the most referenced on the market.

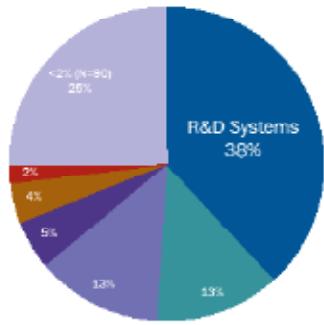

High Specificity

- Every complete ELISA kit is extensively tested against related molecules and common interfering substances to ensure no cross-reactivity or interference.

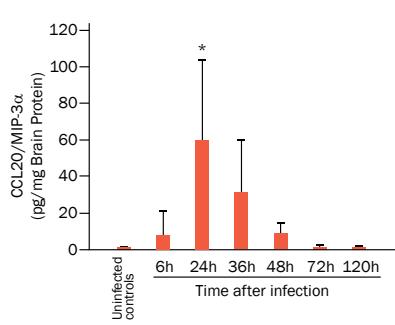

Accurate Detection of Natural Proteins

- Our antibody pairs recognize the supplied recombinant standard and natural proteins in biological samples in a parallel manner.

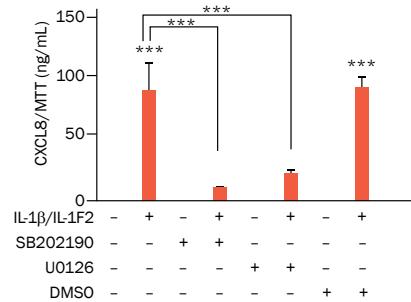

Most Referenced ELISA Manufacturer

ELISA Citations by Vendor. A literature survey of 1,125 manuscripts published in 2013, containing 15,180 product citations from 18 different journals related to cancer, immunology, neuroscience, and stem cells, was conducted to determine the number of citations referencing the use of R&D Systems® ELISA kits compared to the number referencing ELISA kits supplied by other companies. Of the 792 ELISA citations identified in the survey, 38% cited the use of our ELISA kits. The percentage of citations attributed to five other ELISA suppliers is also shown (clockwise from R&D Systems, green-red sections). The final section in the pie chart (25%, light blue section) includes 198 citations referencing products from 90 different companies. All companies listed under this category had less than 2% of the total number of citations.

CCL20/MIP-3 α Expression during Acute Pneumococcal Meningitis. CCL20/MIP-3 α levels were measured in brain homogenates of C57BL/6 mice infected with *Streptococcus pneumoniae* type D39 at various time points after infection using the Mouse CCL20/MIP-3 α Quantikine® ELISA Kit (R&D Systems, Catalog # MCC200). Brain CCL20/MIP-3 α levels were also analyzed in uninfected controls. *P<0.001 compared with uninfected controls. Graph from Klein, M. et al. (2014) *PLoS One* 9:e93057.

IL-1 β /IL-1F2-Induced CXCL8/IL-8 Expression in Astrocytes is Mediated by MAP Kinases. Human astrocyte cell cultures were treated with either an inhibitor specific for p38 (SB202190) or ERK (U0126), or DMSO (control) for 2 hours, followed by treatment with Recombinant Human IL-1 β /IL-1F2 (Catalog # 201-LB). The levels of CXCL8/IL-8 in cell culture supernatants were measured using the Human CXCL8/IL-8 Quantikine® ELISA Kit (Catalog # D8000C). CXCL8/IL-8 protein levels were normalized to the number of viable cells as measured using a MTT assay. ***P<0.001. Graph from Mamik, M.K. and A. Ghorpade (2012) *PLoS One* 7:e45596. All cited reagents are from R&D Systems.

DuoSet® ELISA Development Systems

R&D Systems® DuoSet® ELISA Development Systems allow you to develop the immunoassay that you need using our gold-standard ELISA reagents. They are an economical alternative to buying separate antibodies and protein standards when complete kits are not an option.

Customizable to Fit Your Needs

- Our ELISA development systems are adaptable to multiple platforms, such as Gyrolab™, MSD®, Luminex®, and 384-well plates, and we offer tailored protocols and ancillary kits.

Trustworthy Performance

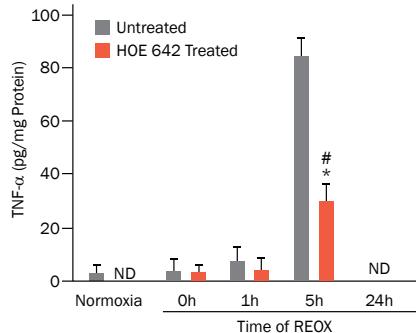

- Capture and detection antibodies are carefully selected to ensure their flawless performance as a sandwich ELISA antibody pair.

We Have What You Need

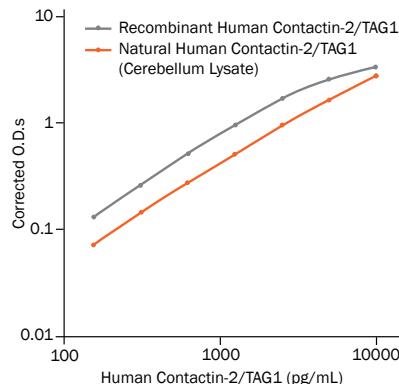

- We offer the largest selection of analytes (>750) for the most species.

Economical

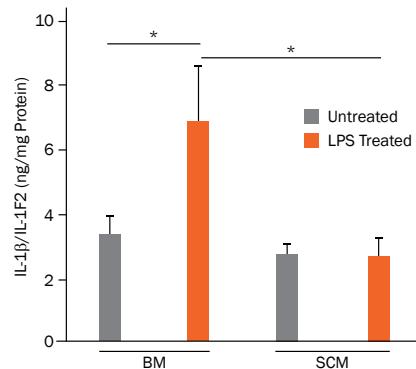

- Many analytes are offered in a smaller 5-plate pack.

TNF- α Release from Hippocampal Astrocytes Following OGD/REOX. Primary astrocyte cell cultures prepared from the hippocampus of post-natal day 3-4 mice were subjected to *in vitro* ischemia. Briefly, cell cultures were exposed to either 2 hours of normoxia or 2 hours of oxygen and glucose deprivation (OGD) followed by varying times of reoxygenation (REOX). During the REOX phase, astrocytes were either untreated (gray bars) or treated with HOE 642, a Na⁺/H⁺ exchanger isoform 1 inhibitor (orange bars). Levels of TNF- α in the culture medium were measured using the Mouse TNF- α DuoSet® ELISA Development System (R&D Systems, Catalog # DY410). ND: not detectable.
 *P<0.05 OGD/REOX versus normoxic control.
 #P<0.05 OGD/REOX HOE 642 treated versus OGD/REOX untreated. Graph from Cengiz, P. et al. (2014) PLoS One 9:e84294.

Recognition of Recombinant and Natural Human Contactin-2/TAG1. Serial dilutions of a Contactin-2/TAG1 protein standard (gray line), which was generated from Recombinant Human Contactin-2/TAG1 (Catalog # 1714-CN), or natural Contactin-2/TAG1 present in human cerebellum tissue lysates (orange line) were quantified using the Human Contactin-2/TAG1 DuoSet® ELISA Development System (Catalog # DY1714). The DuoSet® ELISA detected both recombinant and natural proteins in a parallel manner across a range of concentrations. All cited reagents are from R&D Systems.

LPS Specifically Induces Brain Microglia to Secrete IL-1 β /IL-1F2. Primary microglia cell cultures prepared from either brain (BM) or spinal cord (SCM) of post-natal day 1 Sprague-Dawley rats were treated with lipopolysaccharide (LPS) for 24 hours or remained untreated. Levels of IL-1 β /IL-1F2 were measured in the media from treated (orange bars) and untreated (gray bars) BM and SCM cultures using the Rat IL-1 β /IL-1F2 DuoSet® ELISA Development System (R&D Systems, Catalog # DY501). *P<0.03 BM LPS Treated versus BM Untreated, and BM LPS Treated versus SCM LPS Treated. MULTIANALYTE TESTING

Proteome Profiler™ Antibody Arrays

R&D Systems® Proteome Profiler™ Antibody Arrays are highly efficient, qualitative tools that utilize a simple two-site sandwich assay principle to detect the presence of multiple analytes in a single sample.

Cost-Effective Screening Method

- Each array offers a quick and inexpensive analysis of many analytes simultaneously, in less time than it takes to perform a Western blot.

No Specialized Equipment Needed

- They are designed to utilize the same data collection equipment used for Western blots.

Wide Selection

- Choose from over 25 arrays for the detection of both intracellular and extracellular factors from a broad variety of sample types.

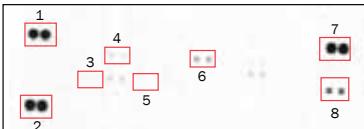

User-Friendly Design

- Each array is stamped with an identification number for easy record keeping and contains reference spots in three corners for orientation purposes.

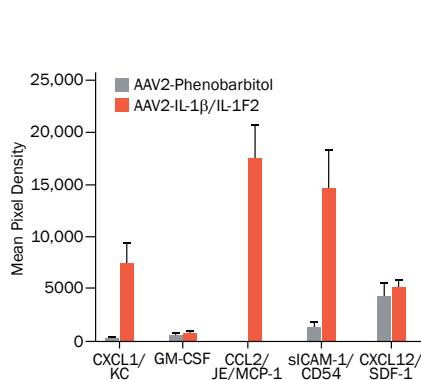

Multiple Detection Methods Available

- Arrays can utilize either chemiluminescence or LI-COR® infrared fluorescence detection.*

IL-1 β /IL-1F2 + TNF- α

Cytokines that were Newly Expressed

1. C5/C5a (Complement Component 5/5a)
2. sICAM-1 (CD54)
3. IL-1 β (IL-1F2)
4. IP-10 (CXCL10)
5. MIP-1 α (CCL3)
6. RANTES (CCL5)
7. TNF- α (TNFSF1A)
8. IL-1ra (IL-1F3)

Cytokines with Changes in Expression Levels

1. G-CSF (CSF β , CSF-3)
2. GM-CSF (CSF α , CSF-2)
3. GRO α (CXCL1)
4. IL-6
5. IL-8 (CXCL8)
6. MCP-1 (CCL2)
7. MIF (GIF, DER6)
8. Serpin E1 (PAI-1)

Cytokine Profile of Cultured Human Astrocytes.

Human primary astrocyte cell cultures were treated with recombinant human IL-1 β /IL-1F2 and TNF- α for 24 hours or remained untreated. Conditioned media from the cultures were harvested and assayed for the presence of 36 cytokines using the Proteome Profiler™ Human Cytokine Antibody Array (Catalog # ARY005). Cytokines that were newly expressed (red boxes) or whose expression changed (blue boxes) following treatment are highlighted. *Image from Choi, S.S. et al. (2014) PLoS One 9:e92325.*

Luminex® Screening Assays

R&D Systems® Luminex® Screening Assays are designed to maximize multiplexing capacity and flexibility while maintaining assay specificity.

Most Flexible

- Choose from over 250 analytes.
- All analytes are available in either the polystyrene or magnetic microparticle format.

Largest Luminex® Multiplex Selection Available

- These screening assays allow you to maximize the use of your samples by simultaneously analyzing up to 100 analytes.

Unique Analytes Offered

- Over 25% of our portfolio of analytes are unique to us.

Luminex® Performance Assays

R&D Systems® Luminex® Performance Assays are designed to maximize assay accuracy and precision while preserving the benefits of multiplexing.

Most Accurate

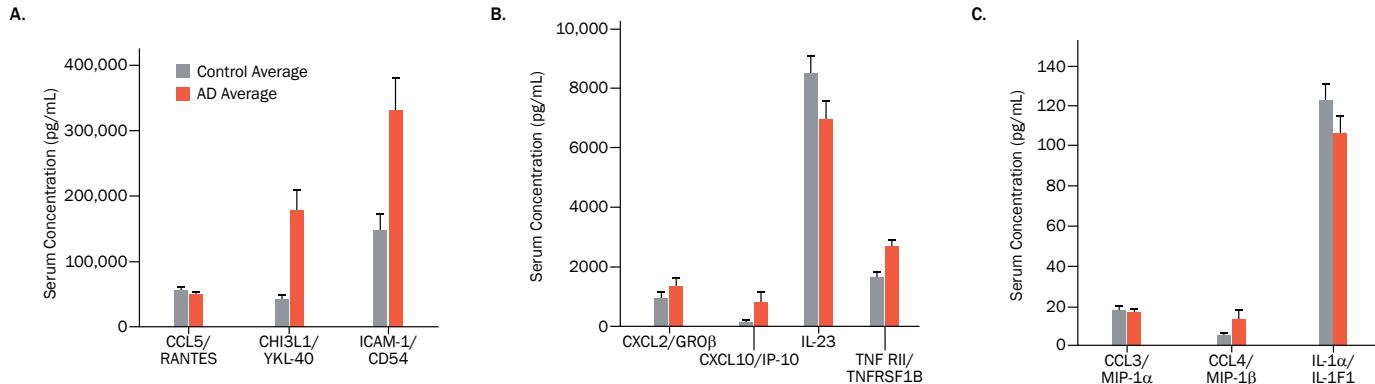

- Panel development and validation testing for these assays are similar to our gold-standard Quantikine® ELISA Assays.

Flexible

- Select panels are available in either the polystyrene or magnetic microparticle format.

Customizable to Fit Your Needs

- Users can choose their analytes of interest from established panels and select “premixed” or “end-user mixed” options.

Detection of Neuroinflammation and Alzheimer's Disease Biomarkers in Human Serum. The Human Luminex® Screening Assay (R&D Systems, Catalog # LXS AH) was used to measure 31 markers of neuroinflammation and Alzheimer's disease (AD) pathology in human serum samples. Samples were collected from individuals with AD (orange bars; N=20) and from apparently healthy individuals (gray bars; N=20); no medical histories were available. Histogram profiles for select analytes measured at high (A), moderate (B), and low (C) expression levels.

Simple Plex™ Your Analytes: A Novel Hands-Free, Multianalyte Immunoassay

Meet Ella™

Ella runs Simple Plex™ Assays. These novel assays are fully automated, quantitative, multianalyte immunoassays that will transform your research possibilities.

Why Use Simple Plex™

✓ Unmatched Performance

Quantify up to 4 analytes in a single 25 μ L sample. Ella™ is sensitive enough to detect sub-picogram levels of protein and has a 4-5 log dynamic range to help avoid sample dilution.

✓ Fast Results

Setup only takes 5 minutes. You simply pipette your samples into our cartridge, which automates the entire assay for you. Data is ready in 60 minutes.

✓ Unrivaled Content

Over 120 human analytes are currently available. And with our catalog being powered by R&D Systems, our menu is unlimited. Just let us know what you need!

SMALL MOLECULES AND PEPTIDES

The range of Tocris small molecules and peptides represents a unique collection of over 3,500 novel and exclusive research tools.

A Unique Collection of Innovative Products

- Everything from the latest exclusively licensed research tools to established biochemical standards.

Unrivaled Product Quality

- Our products have certified high purity, typically greater than 99% by HPLC.

Specialist Technical Support

- Our team of scientifically trained personnel is here to help.

Responsible and Ethical Practice

- It is our policy to never knowingly infringe third party intellectual property.

Pharmaceutical Collaboration

- A number of Tocris products are licensed from pharmaceutical companies and research institutions.

Our Extensive Catalog Includes Products for the Study of Neuroscience:

Research Tools

- Caged Compounds
- Fluorescent Probes
- Peptides
- Photoswitchable Ligands
- Screening Libraries
- Small Molecules
- Toxins

Pharmacological Targets

- 5-HT
- Acetylcholine
- Cannabinoids
- Dopamine
- GABA
- Glutamate
- Opioids
- Voltage-Gated Ion Channels

Neurological Disorders

- Alzheimer's Disease
- Depression
- Epilepsy
- Huntington's Disease
- Parkinson's Disease
- Schizophrenia
- Stroke

Bulk and Custom Ordering

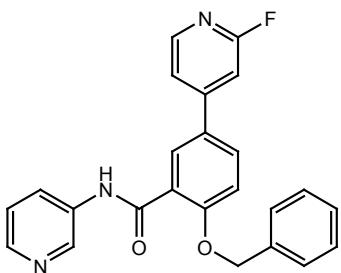

Bio-Techne is able to offer competitive discounts on Tocris products purchased in bulk quantities as either individual or multiple items. Discounts are typically applied at five times the standard unit size and progressively rise as the quantity increases. If the product you are interested in is not currently listed on our website we will be happy to look for a supplier on your behalf.

To request a bulk quantity quotation, please use our bulk order online enquiry form or contact us with your requirements. We will do our best to accommodate your needs.

Tocris Offers a Novel and Diverse Selection of Tool Compounds

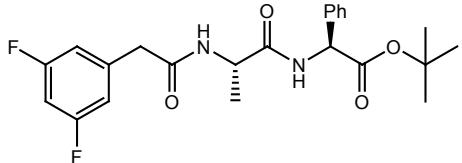

Potent and Selective LRRK2 Inhibitor. GSK2578215A (Tocris, Catalog # 4629) is a potent Leucine-Rich Repeat Ser/Thr Protein Kinase 2 (LRRK2) inhibitor (IC_{50} values are 8.9 and 10.1 nM for LRRK2[G2019S] mutant and wild-type LRRK2 respectively). It displays selectivity for LRRK2 against a panel of 460 other kinases. This compound blocks Ser910 and Ser935 phosphorylation *in vitro* and in peripheral tissues *in vivo*. It is brain penetrant. Sold for research purposes under agreement from GlaxoSmithKline.

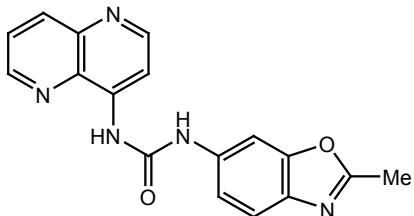

Selective 5-HT_{2c} Antagonist. SB 242084 (Tocris, Catalog # 2901) is a selective 5-HT_{2c} antagonist that exhibits >100-fold selectivity for 5-HT_{2c} over other 5-HT receptors. The compound exerts anxiolytic-like activity and is brain penetrant.

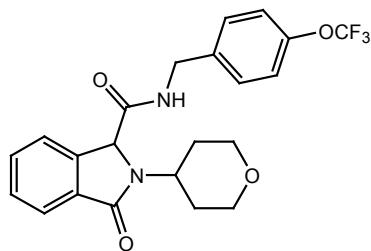

Stable Photoreleaser of L-Glutamate. MNI-caged-L-glutamate (Catalog # 1490) rapidly and efficiently releases glutamate (Catalog # 0218) when photolyzed (300–380 nm excitation). The compound is water-soluble, highly resistant to hydrolysis, stable at a neutral pH, and pharmacologically inactive at neuronal glutamate receptors (up to mM concentrations). It is also 2.5-fold more efficient at releasing L-glutamate than NI-caged L-glutamate. All cited reagents are from Tocris.

Potent γ -Secretase Inhibitor. DAPT (Tocris, Catalog # 2634) is a γ -Secretase inhibitor that reduces A β 40 and A β 42 levels in primary human neurons *in vitro*, as well as in brain extract, cerebral spinal fluid, and plasma *in vivo*. DAPT also inhibits Notch signaling and induces neuronal differentiation in embryonic stem cell-derived embryoid bodies.

Selective OX₁ Receptor Antagonist. SB 334867 (Tocris, Catalog # 1960) is a selective non-peptide Orexin OX₁ Receptor antagonist shown to inhibit intracellular Ca²⁺ release from Chinese hamster ovary (CHO) cells that express OX₁ Receptors ($pK_b = 7.2$). Systemic administration of SB 334867 blocks Orexin A-induced grooming and feeding behavior. Sold for research purposes under agreement from GlaxoSmithKline.

Selective Na_{1.7} Channel Blocker. NAV 26 (Tocris, Catalog # 4691) is a selective Na_{1.7} channel blocker ($IC_{50} = 370$ nM) that exhibits >85-fold selectivity for Na_{1.7} over Na_{1.5} and hERG channels. The compound reduces nociceptive behavior in rat models of pain.

P2Y Receptors	2159	MRS 2500	Extremely potent and selective P2Y ₁ antagonist
Non-Selective	3209	α,β-Methyleneadenosine 5'-triphosphate trisodium salt	P2 agonist
TRK			
TrkB Receptors	2837	BDNF (human)	Activates TrkB and p75 Receptors
TrkB Receptors	3826	7,8-Dihydroxyflavone	TrkB agonist
TRP Channels			
TRPA Channels	2896	HC 030031	Selective TRPA1 blocker
TRPA Channels	1531	Icilin	Activates a novel cold receptor; cooling agent
TRPC Channels	4912	GsMTx4	TRPC1 and TRPC6 blocker; inhibits mechanosensitive ion channels
TRPC Channels	4732	ML 204	Selective TRPC4 blocker
TRPC Channels	1147	SKF 96365	TRPC channel blocker; also inhibits store-operated Ca ²⁺ entry
TRPM Channels	4632	TC-I 2000	TRPM8 blocker
TRPM Channels	3040	WS 12	TRPM8 agonist; cooling agent
TRPV Channels	4319	A 784168	Potent and selective TRPV1 antagonist
TRPV Channels	0464	Capsazepine	Vanilloid Receptor antagonist; also activator of ENaCδ
TRPV Channels	5106	GSK 2193874	Potent and selective TRPV4 inhibitor; orally active
Voltage-Gated Ion Channels			
Calcium Channels	1085	ω-Conotoxin GVIA	Ca ²⁺ channel blocker (N-type)
Calcium Channels	2198	Mibepradil	Ca ²⁺ channel blocker (T-type)
Calcium Channels	3954	trans-Ned 19	NAADP antagonist; inhibits Ca ²⁺ release
Calcium Channels	3775	Pregabalin	Anticonvulsant; selectively binds the α ₂ δ subunit of voltage-sensitive calcium channels
Chloride Channels	3430	CFTR _{inh} 172	Voltage-independent, selective CFTR chloride channel blocker
Chloride Channels	4538	T16A _{inh} - A01	Ca ²⁺ -activated Cl ⁻ Channel Transmembrane Protein 16A (TMEM16A) inhibitor
Potassium Channels	1808	E-4031	K _v 11.1 (hERG) channel blocker; inhibits rapid delayed rectifier K ⁺ current (I _{Kr})
Potassium Channels	5011	HMR 1556	Potent and selective I _{ks} channel blocker
Potassium Channels	4949	MaxiPost	K ⁺ channel modulator; exerts subtype-specific effects
Potassium Channels	4777	ML 277	Selective K _v 7.1 (KCNQ1) potassium channel activator; augments I _{ks} current
Potassium Channels	1316	Tertiapin-Q	Selective blocker of inward-rectifier K ⁺ channels
Potassium Channels	4952	TRAM 39	Potent K _{Ca} 3.1 blocker
Sodium Channels	2976	A 803467	Selective Na _v 1.8 blocker
Sodium Channels	5066	ICA 121431	Selective Na _v 1.3 and Na _v 1.1 blocker
Sodium Channels	4691	NAV 26	Selective Na _v 1.7 channel blocker

CELL CULTURE AND NEURAL STEM CELLS

Bio-Techne offers a range of high-quality and affordable neural cell culture reagents that support neural stem cell (NSC) experimentation and ensure that your neuroscience workflow is efficient and reliable.

Complete Workflow Coverage

- We have products for all aspects of NSC experimentation, from culture and expansion to differentiation and verification.

Minimize Experimental Variability

- From our cell culture media and stem cell kits to our individual growth factors and antibodies, our products are designed and tested to guarantee performance consistency.

Save Time and Money

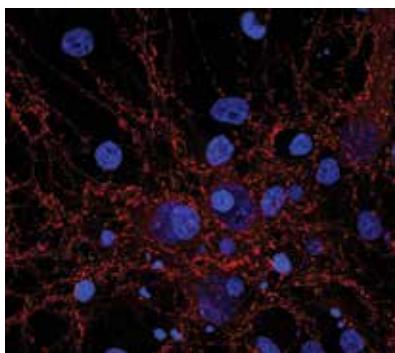

- Our products reduce experimental variability to prevent wasted effort and reagents and allow for more confident data analysis.

Neural Media Supplements

Our serum-free cell culture media supplements are designed for the optimal, long-term growth of NSCs and neuronal cultures and are an affordable equivalent to standard commercial neuronal culture media.

N21-MAX Media Supplements

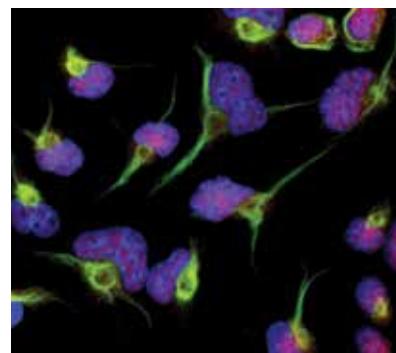

Improving upon the formulation of traditional B27 and NS21 neuronal supplements, our range of N21-MAX Media supplements are designed to optimize the maturation, health, and function of primary neurons in culture. Each lot is checked in-house for performance consistency.

N21-MAX Vitamin A Free Media Supplement Maintains Healthy Primary Neurons in Culture.
E18 rat hippocampal neurons were grown for 21 days *in vitro* in media supplemented with N21-MAX Vitamin A Free Media Supplement (Catalog # AR012). The cells were then stained with a Mouse Anti-Rat Synaptotagmin Monoclonal Antibody (Catalog # MAB4364) followed by the NL557-Conjugated Donkey Anti-Mouse IgG Secondary Antibody (Catalog # NL007; red) and counterstained with DAPI (blue). All cited reagents are from R&D Systems.

N-2 Media Supplements

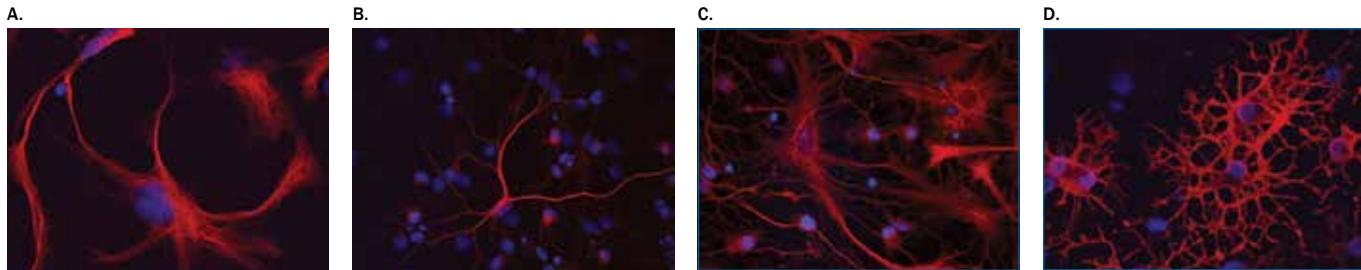

N-2 MAX and N-2 Plus are designed for the efficient expansion and differentiation of NSCs. They can also be used to maintain and mature a range of NSC-differentiated cell types including astrocytes and oligodendrocytes. Each lot is checked in-house for performance consistency.

N-2 MAX Media Supplement Provides Optimal Growth Conditions for Neural Progenitor Cell Expansion
Human neural progenitor cells were maintained in culture with N-2 MAX Media Supplement (Catalog # AR009). The cells were then stained for SOX1 expression using a Goat Anti-Human SOX1 Antigen Affinity-Purified Polyclonal Antibody (Catalog # AF3369) followed by a NL557-Conjugated Donkey Anti-Goat IgG Secondary Antibody (Catalog # NL001; red). The cells were also stained for Nestin expression using a Mouse Anti-Mouse/Rat Nestin Monoclonal Antibody (Catalog # MAB2736) followed by a NL493-Conjugated Donkey Anti-Mouse IgG Secondary Antibody (Catalog # NL009; green). The cells were counterstained with DAPI (blue). All cited reagents are from R&D Systems.

Identification and Verification Kits

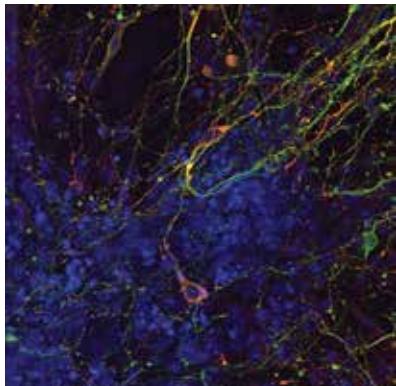

Validating the multipotency of a NSC population prior to its expansion, differentiation, and experimentation will ensure confidence when analyzing the data from downstream experiments. Using suboptimal, unverified NSC populations puts you at risk for inconsistent results, thus wasting time and reagents. We offer a variety of solutions to quickly and confidently assess NSC multipotency.

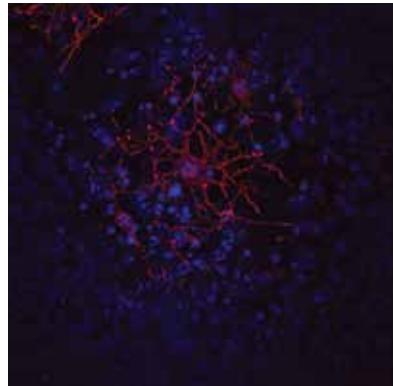

Functional Verification of Neural Progenitor Cell Multipotency. Rat neural progenitor cells (A) were maintained in culture and differentiated towards neural lineages using the Human/Mouse/Rat Neural Lineage Functional Identification Kit (R&D Systems, Catalog # SC028). NSC differentiation into neurons (B), astrocytes (C), and oligodendrocytes (D) was validated using the cell-specific marker antibodies supplied in the kit. Neural progenitor cells were detected using a Goat Anti-Rat Nestin Antigen Affinity-Purified Polyclonal Antibody, neurons were detected using a Mouse Anti-Neuron-Specific β III Tubulin Monoclonal Antibody, astrocytes were detected using a Sheep Anti-Human GFAP Antigen Affinity-Purified Polyclonal Antibody, and oligodendrocytes were detected using a Mouse Anti-Oligodendrocyte Marker O4 Monoclonal Antibody. The nuclei were counterstained with DAPI (blue).

Differentiation Kits

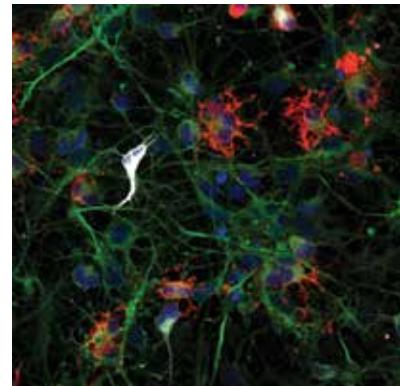

Efficient and consistent NSC differentiation is essential for maximizing research productivity, increasing data reliability, and reducing the cost and labor associated with lengthy differentiation protocols. Our all-in-one kits are specifically designed to efficiently differentiate NSCs into neuronal cell-types. In addition, we offer a wide selection of small molecules to enhance NSC differentiation.

Dopaminergic Neurons Generated from iPS Cells Using the Dopaminergic Neuron Differentiation Kit. Human induced pluripotent stem (iPS) cells were differentiated into dopaminergic neurons using the Human/Mouse Dopaminergic Neuron Differentiation Kit (Catalog # SC001B). A dopaminergic phenotype was confirmed using a Mouse Anti-Human Tyrosine Hydroxylase Monoclonal Antibody (Catalog # MAB7566) followed by the NL557-Conjugated Donkey Anti-Mouse IgG Secondary Antibody (Catalog # NL007; red). The cells were also stained with a Mouse Anti-Neuron-Specific β III Tubulin (Clone TuJ-1) Monoclonal Antibody (Catalog # MAB1195) followed by the NL493-Conjugated Donkey Anti-Mouse IgG Secondary Antibody (Catalog # NL009; green). The nuclei were counterstained with DAPI (blue). All cited reagents are from R&D Systems.

Mouse Oligodendrocytes Generated Using the Oligodendrocyte Differentiation Kit. D3 mouse embryonic stem cells were expanded in KO-ES media and differentiated into oligodendrocytes using the Mouse Oligodendrocyte Differentiation Kit (Catalog # SC004). An oligodendrocyte phenotype was detected using a Mouse Anti-Human/Mouse/Rat/Chicken Oligodendrocyte Marker O4 Monoclonal Antibody (Catalog # MAB1326) followed by staining with the NL557-Conjugated Goat Anti-Mouse IgM Secondary Antibody (Catalog # NL019; red). The nuclei were counterstained with DAPI (blue). All cited reagents are from R&D Systems.

β III Tubulin, GFAP, and Oligodendrocyte Marker O4 in Differentiated Rat Cortical Stem Cells. Rat cortical stem cells (Catalog # NSC001) were differentiated into neurons, astrocytes, and oligodendrocytes using the Human/Mouse/Rat Neural Lineage Functional Identification Kit (Catalog # SC028). Differentiated cells were stained with cell-specific antibodies from the Human/Mouse/Rat Neural 3-Color Immunocytochemistry Kit (Catalog # SC024). Neurons were stained with a NL637-Conjugated Mouse Anti-Neuron-Specific β III Tubulin Monoclonal Antibody (Clone TuJ-1; white), astrocytes were stained with a NL493-Conjugated Sheep Anti-GFAP Antigen Affinity-Purified Polyclonal Antibody (green), and oligodendrocytes were stained with a NL557-Conjugated Mouse Anti-Oligodendrocyte Marker O4 Monoclonal Antibody (red). The nuclei were counterstained with DAPI (blue). All cited reagents are from R&D Systems.

CELL CULTURE AND NEURAL STEM CELLS

Cortical Stem Cells and Cryopreservation Medium

Product	Catalog #	Description
Rat Primary Cortical Stem Cells	NSC001	Isolated from E14.5 Sprague-Dawley rats; 3 x 10 ⁶ cells/vial
Mouse Primary Cortical Stem Cells	NSC002	Isolated from E14.5 CD-1 mice; 2 x 10 ⁶ cells/vial
CryoDefend™-Stem Cells	CCM018	Media for protein-free cryopreservation of stem cells

Cell Culture Supplements and Substrates

Product	Catalog #	Description
N-2 Plus Media Supplement	AR003	Optimized for neural progenitor cells and their differentiated derivatives; contains bovine Insulin
N-2 MAX Media Supplement	AR009	Optimized for neural progenitor cells and their differentiated derivatives; contains recombinant human Insulin
N21-MAX Media Supplement	AR008	Superior growth supplement for the long-term culture of neurons; optimized formulation of the original B27 ingredients
N21-MAX Insulin Free Media Supplement	AR010	Growth supplement for insulin-sensitive neuronal cell cultures; optimized and insulin-free formulation of the original B27 ingredients
N21-MAX Vitamin A Free Media Supplement	AR012	For neural stem cell expansion; limits retinoic acid production to reduce unwanted differentiation
Holo-Transferrin	2914-HT	Facilitates iron transport and improves cell proliferation in culture
StemXVivo™ Culture Matrix	CCM013	A defined matrix for the growth and differentiation of stem cells and progenitor cells
Human Fibronectin, CF	1918-FN	Carrier Free, plasma-derived protein that facilitates NSC adherence to culture dishes and promotes NSC expansion <i>in vitro</i> ; does not contain BSA
Mouse Fibronectin, CF	1030-FN	Carrier Free, plasma-derived protein that facilitates NSC adherence to culture dishes and promotes NSC expansion <i>in vitro</i> ; does not contain BSA
Recombinant Human Fibronectin Full, CF	4305-FN	Carrier Free, NS0 murine myeloma cell line-derived protein that facilitates NSC adherence to culture dishes and promotes NSC expansion <i>in vitro</i> ; does not contain BSA
Recombinant Human Fibronectin Fragment 2	3225-FN	Carrier Free, NS0 murine myeloma cell line-derived protein that facilitates NSC adherence to culture dishes and promotes NSC expansion <i>in vitro</i> ; does not contain BSA
Recombinant Human Fibronectin Fragment 3	3938-FN	Carrier Free, NS0 murine myeloma cell line-derived protein that facilitates NSC adherence to culture dishes and promotes NSC expansion <i>in vitro</i> ; does not contain BSA
Recombinant Human Fibronectin Fragment 4	3624-FN	Carrier Free, NS0 murine myeloma cell line-derived protein that facilitates NSC adherence to culture dishes and promotes NSC expansion <i>in vitro</i> ; does not contain BSA
Recombinant Human Fibronectin, ACFP	ACFP4305	Animal Component-Free Process (ACFP) Fibronectin, derived from the <i>baculovirus Spodoptera frugiperda</i> , Sf 9; facilitates NSC adherence to culture dishes and promotes NSC expansion <i>in vitro</i>
Cultrex® Poly-L-Lysine	3438-100-01	A highly positively charged amino acid chain; used as a coating agent to promote cell adhesion in culture

NSC Kits

Product	Catalog #	Description	Species
Neural Lineage Functional Identification Kit	SC028	Verify multipotency of human, mouse, and rat neural progenitor cells (NPCs) by functional differentiation	H, M, R
Neural 3-Color Immunocytochemistry Kit	SC024	Characterize human, mouse, and rat neural cells differentiated from NPCs	H, M, R
Neural Progenitor Cell Marker Antibody Panel	SC025	Contains a collection of neural progenitor markers to verify multipotency	H, M, R
Dopaminergic Neuron Differentiation Kit	SC001B	Differentiates human and mouse ES/iPS cells into dopaminergic neurons under serum-free conditions	H, M
Oligodendrocyte Differentiation Kit	SC004	Differentiates mouse ES/iPS cells into oligodendrocytes under serum-free conditions	M

CELL CULTURE AND NEURAL STEM CELLS

Small Molecules for NSC Expansion

Product	Catalog #	Primary Action
17-AAG	1515	Selective HSP90 inhibitor; protects neural progenitors from naturally occurring apoptosis
Amiodarone	4095	Ion channel blocker; selectively inhibits NSC proliferation in hESC-derived cell populations
CHIR 99021	4423	Selective GSK-3 inhibitor; enhances ESC self-renewal in combination with PD 0325901 (Tocris, Catalog # 4192)
Cyclopamine	1623	Hedgehog signaling inhibitor; suppresses the proliferation of <i>Ptch1^{+/−}</i> medulloblastoma precursor cells
DMH-1	4126	Selective ALK2 Receptor inhibitor; promotes iPSC neurogenesis in combination with SB 431542 (Tocris, Catalog # 1614)
INDY	4997	Dyrk1A/B inhibitor; impairs the self-renewal capacity of NSCs
P7C3	4076	Neuroprotective and proneurogenic compound; orally available
SB 431542	1614	Induces proliferation, differentiation and sheet formation of ESC-derived endothelial cells
SU 5402	3300	Potent FGF R and VEGF R inhibitor; attenuates Integrin β4-mediated differentiation of neural stem cells
Y-27632	1254	Selective p160ROCK inhibitor; enhances survival of hES cells undergoing cryopreservation

Small Molecules for NSC Differentiation

Product	Catalog #	Primary Action
DAPT	2634	γ-Secretase inhibitor; induces neuronal differentiation of neural cells
Fluoxetine	0927	5-HT re-uptake inhibitor; induces differentiation of neuronal precursors
Forskolin	1099	Adenylyl Cyclase activator; induces neuronal differentiation in NSCs
Isotretinoin	5513	Inducer of neuronal differentiation; endogenous agonist for retinoic acid receptors
ISX 9	4439	Induces neuronal differentiation of SVZ progenitors
KHS 101	4888	Selective inducer of neuronal differentiation in hippocampal neural progenitors
Metformin	2864	Antidiabetic agent; promotes neurogenesis
Neurodazine	3656	Induces neurogenesis in mature skeletal muscle cells
Neuropathiazol	5186	Selective inducer of neuronal differentiation in hippocampal neural progenitors
1-Oleoyl lysophosphatidic acid sodium salt	3854	Endogenous agonist of LPA ₁ and LPA ₂ ; inhibits differentiation of NSCs into neurons
O-Phospho-L-serine	0238	Group III mGlu agonist; inhibits proliferation and enhances neuronal differentiation of progenitor cells
Retinoic acid	0695	Retinoic Acid Receptor agonist; promotes differentiation of ESCs into neurons, glia and adipocytes
TCS 2210	3877	Inducer of neuronal differentiation in MSCs
TWS 119	3835	GSK-3β inhibitor; induces neuronal differentiation in ESCs
Valproic acid, sodium salt	2815	Histone Deacetylase inhibitor; promotes neuronal differentiation

CUSTOM SERVICES

The same skills that are behind the trusted brands of R&D Systems, Novus Biologicals, Tocris Bioscience, and ProteinSimple can be leveraged to develop unique solutions for your research demands.

All projects start with an extensive consultation to capture all the specific performance requirements. A team consisting of our research and development scientists, manufacturing engineers, and project management staff is assembled to ensure your custom solution is delivered successfully.

Examples of Recent Projects

- Custom cloning and expression of recombinant Fc-fusion proteins.
- Conversion of a traditional hybridoma to recombinant antibody.
- Custom development of Luminex® assays to analyze unique combinations of pre-clinical biomarkers.

Our Services

RECOMBINANT PROTEINS

- Development and manufacturing of novel proteins, which will meet our strict development and purification standards
- Addition or removal of Fc tag
- Development of novel GMP-grade, Animal-Free, and Animal-Component-Free Process proteins

ANTIBODIES

- Development of novel polyclonal and monoclonal antibodies
- Conversion of hybridoma antibodies to recombinant antibodies
- Production of non-catalog sister clones
- Purification and conjugation services

ELISAs

- Production of complete ELISA kits
- Screening of matched antibody pairs
- Precision automated microplate coating
- Facilitation of the transition from RUO to IVD

LUMINEX® ASSAYS

- Development and validation of custom assays for detection of up to 100 different analytes
- Internally and externally sourced antibodies

Biomarker Testing Service

A reliable and proactive partner for research or clinical trial projects. Trust the experts who develop ELISA kits with your precious samples. Our dedicated team also specializes in the following sample testing services:

- Luminex® Multiplex Assays
- Proteome Profiler™ Antibody Arrays
- Bioassays
- Cell-Based ELISAs, ELISpot kits, and more!

CUSTOM CHEMISTRY

Tocris is a specialist in complex multistage organic and biological chemistry. Our team of experienced scientists has a range of skills that are crucial for the success of your custom project. Services offered include:

- Custom synthetic chemistry including small molecule/fine chemical synthesis, stable labeling, metabolites, and conjugation strategies
- Chemical sourcing such as extraction and supply of natural products, and synthesis of modified and unmodified peptide chains
- Chemical analysis and analytical support for NMR, MS, HPLC, LCMS, and GC
