

TLR9 protein expression was determined in 21-day old mouse brain tissue by Simple Western 12-230kD matrix using antibody against TLR9 (NBP1-77254) .

A 92kDa band was observed and used for quantitation.

Although this product works, signal is weak in mouse brain tissue and unexpected bands are shown. In order to get signal, higher concentration of protein (1ug/ul) was loaded.
